

## Supporting ZionSolutions, LLC in the Design and Fabrication of Equipment for the Zion Station D&D Project

### Stand to Support the GTCC Liners

*PlantDecommissioning designed and fabricated a stand for the two GTCC liners that hold the Greater Than Class C components of the Reactor Internals.*

Because of logistics and limited space in the pool, the GTCC liners were to be located in the transfer canal. The addition of a separate frame to act as a seismic restraint was added after stand fabrication. Placement of the stand and frame into the final location required clearances of less than 1-inch (25mm) in some areas.
